US-PAT-NO: 5650275

DOCUMENT-IDENTIFIER: US 5650275 A

TITLE: Target detection method using spectroscopically detectable nucleic acid ligands

DATE-ISSUED: July 22, 1997

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Pitner; J. Bruce	Durham	NC	27704	
Malinowski; Douglas P.	Hillsborough	NC	27278	
Vonk; Glenn P.	Fuquay-Varina	NC	27527	
Gold; Larry	Boulder	CO	80302	

US-CL-CURRENT: 435/6

ABSTRACT:

The invention relates to methods of using spectroscopically detectable labeled receptor molecules to determine the presence or absence of a target compound in a sample. In one embodiment, spectroscopically detectable labeled nucleic acid ligands are used to determine the presence or absence of biological targets of interest in biological samples.

TITLE: High-affinity RNA ligands for basic fibroblast growth factor

DATE-ISSUED: June 17, 1997

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Janjic; Nebojsa	Boulder	CO		
Gold; Larry	Boulder	CO		

US-CL-CURRENT: 536/22.1; 435/6, 435/91.2

ABSTRACT:

Methods are described for the identification and preparation of nucleic acid ligand solutions to basic fibroblast growth factor (bFGF). Included in the invention are nucleic acid ligands to bFGF which are inhibitors of bFGF and 2'-amino-modified RNA ligands to bFGF.

TITLE: Nucleic acid ligands

DATE-ISSUED: December 12, 1995

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Gold; Larry	Boulder	CO		
Tuerk; Craig	Boulder	CO		

US-CL-CURRENT: 536/23.1

ABSTRACT:

A new class of nucleic acid compounds, referred to as nucleic acid ligands, have been shown to exist that have a specific binding affinity for three dimensional molecular targets. In a preferred embodiment the nucleic acid ligands are identified by the method of the invention referred to as the Systematic Evolution of Ligands by EXponential enrichment (SELEX), wherein a candidate mixture of nucleic acids are iteratively enriched in high affinity nucleic acids and amplified for further partitioning.
